

20th Breastfeeding: Practice & Policy Course

About the course

Our masters-level course is the only advanced international training course on breastfeeding and related topics available worldwide.

It is designed for senior health professionals who lead, coordinate, or commission work on infant feeding; or who teach others or find themselves acting as a resource-person or giving strategic direction on breastfeeding and infant nutrition.

The course aims to strengthen participant's capacity for making an evidence-based case for investing in breastfeeding, and to take an active role in the broad spectrum of protecting, promoting and facilitating optimal infant feeding practices.

Typically participants include paediatricians, midwifery lecturers, directors of primary care, infant feeding coordinators and public health specialists.

The course takes a global perspective and has been found extremely useful by past participants whatever part of the world they come from. Teaching includes regional group work and comparative learning techniques to gain maximum educational advantage from the range of experiences represented in the classroom.

The course is divided in two parts which can be taken together (recommended) or separately.

Part 1: 2 weeks June 6-17th **Breastfeeding: Clinical Management and Public Health**

Part 2: 1 week June 20-24th **Addressing Challenges to Optimal Practice and Implementation.**

Find out more and register.

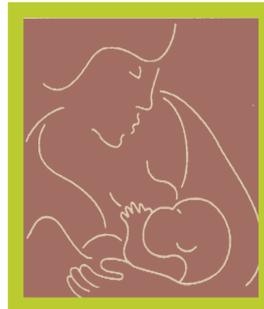

Visit our web site www.ucl.ac.uk/cihd under postgraduate short course programme.
